

# Project VOICE: Notes

Julia Rahmeier

October 15, 2024

## 1 10/08/2024

Currently looking at measures of cognition in nonspeaking individuals and assistive methods.

<https://srcd.onlinelibrary.wiley.com/doi/full/10.1111/j.1467-8624.2011.01619.x>

Children with ASD process audiovisual information in a significantly different way, which might contribute to their language and communication impairment. Differences in attention during social interactions (looking less at the speaker) may have even affected the development of language perception.

Questions:

The main groups included in nonspeaking research are people with ASD or Cerebral Palsy. Should we include both in our research or focus on only one?

## 2 Keywords

Keywords; separated; by; semi-colon

## 3 Notes

### 3.1 Subsection

## 4 Commentary

- List comments and thoughts on paper here. This could be observations, ideas for extending the study, or even critiques.
